

Papyrus Document Capture System 7

The Papyrus Document Capture concept provides an integrated corporate solution for powerful and efficient development, processing and management of inbound document systems.

Concept Outline

With the variety of documents daily entering a company and the need to quickly process and forward them to the right place, the development and operation of a capture system must be independent of document types, input hardware and operating system. Based on a carefully architected 'MIDDLEWARE' concept, ISIS has developed the most powerful document application development tools. Large banks, insurances companies, government organizations, industry and service corporations such as direct marketing companies, all require the speed of development, the elimination of programming effort and the operating system and scanner independence, that is inherent in the **Papyrus inbound Concept**.

The Capture Applications

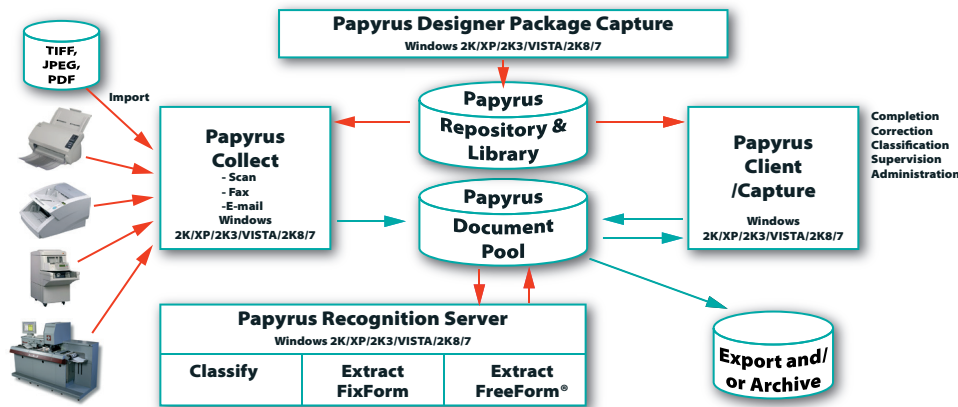

The ISIS Papyrus Document Capture System manages the complete lifecycle from the development of each inbound application to scan and collect, to classify and extract, to completion and transfer to any business application. This includes the document layout and content recognition, document logic, validation interfaces and manual interaction mask design.

As all recognition engines are available during design time, it is guaranteed that the capture quality and results can be verified immediately. Supporting tools for higher volume benchmarking of automation and reject rates allow the best preparation before going live.

Due to a variety of experience based on hundreds of successful projects ISIS provides additionally pre-configured frameworks to start quickly with productive individual customizing. They include all necessary definitions for documents and datafields as well as prepared views for administration and workflow design.

These are:

- **Inbound Mailprocessing Framework**
 - Offers a comfortable environment for both training and testing a Capture System for incoming mail.
- **Capture Framework – Formsprocessing**
 - The standard quick-to-setup configuration for forms of all kinds and types including special processing operation.
- **Capture Framework – Invoice**
 - Incoming freeform documents need more workflow steps and usually a tighter integration to validation data.
- **Document Workplace**
 - Wherever incoming documents must be manually split or rearranged this Papyrus EYE based framework offers all necessary tools and functions.
- **Campaign Management Framework**
 - To process in the most professional way the returns from your various marketing campaigns and to automatically generate answers on the basis of the data received from the customer is provided with this framework.
- **Response Management Framework**
 - Listening to your customers responses and reacting quickly and individually, with highest quality standards and as automated as possible, is made possible within this application.

Papyrus Products

- **Papyrus Designer Package/Capture for Windows 2K/XP/2K3/VISTA/2K8/7** consisting of
 - Capture Designer/FixForm
 - Capture Designer/Classify
 - Capture Designer/FreeForm®
- Graphical development of Document Capture Definitions.
- **Papyrus Collect Products for Windows 2K/XP/2K3/VISTA/2K8/7**
 - Papyrus Scan Adapter
 - Papyrus Fax Adapter
 - Papyrus Adapter/email
- Integrated acquisition of paper and electronic documents.
- **Papyrus Server/FixForm for Windows 2K/XP/2K3/VISTA/2K8/7**
 - Recognition and Extraction of data out of highly structured forms.
- **Papyrus Server/Classify for Windows 2K/XP/2K3/VISTA/2K8/7**
 - Categorizing of heterogeneous documents for automatic forwarding.
- **Papyrus Server/FreeForm® for Windows 2K/XP/2K3/VISTA/2K8/7**

- Processing non structured documents by extracting logical data even from unknown positions.
- **Papyrus Client/Capture for Browser and Desktop (Papyrus EYE) MS IE, Mozilla**
 - The universal User Interface for all user interactions with the document capture system.
- **Papyrus WebRepository** provides basic architecture and totally object oriented infrastructure, including versioning, user control, workflow and integration
- **Papyrus WebArchive** on z/OS, Windows 2K/XP/2K3/VISTA/2K8/7, AIX, HP/Itanium and Sun Solaris for Internet document distribution and storage in TIFF, AFP, PDF and GIF with XML interface to archiving systems.

Order Information

The ISIS Papyrus Document Capture System consists of independent components. Even though these are completely integrated, most of them can be used standalone if required.

Training

ISIS offers a special in-house training service for its clients, the Papyrus Designer Capture Workshops. Please contact us for more details.
